## Network Package

+ SocketObject
implements Serializable

☐ fields

─ type:String

─ stringField:String

─ object:Object

─ constructors

☐ methods

+ getType():String

+ getObject():Object

+ getStringField():String

+ setType(type:String):void

+ setObject(object:Object):void

setStringField(stringField:String):void

+ ClientGatherer
implements Runnable

fields

final port:int

final running: AtomicBoolean

serverSocket: ServerSocket

serverController: ServerController

flag: boolean

constructors

+ ClientGatherer (port:int, serverController: ServerController)

methods

+ run():void

+ stop():void
